

# Silky gel mask deeply moisturizing

## A new texture - a technical gesture

This association of a sweet powder with a glycerin-based lotion concentrated in Fucogel® is a treatment BASE allowing the creation of a deeply moisturizing mask.

### MOISTURIZING + + +

The glycerin-based lotion is enriched with a strong moisturizing ingredient : **Fucogel®** (polysaccharide). **It improves the suppleness of the skin which becomes soft and smooth.** Fucogel® has an immediate and extended moisturizing effect which reaches its maximum 3 hours after the application.

This long time moisturiser gives a **silky touch** to the skin too.

Rich in **glucose**, the sweet powder is an **ideal BASE for soft treatments**. The glucose, that maintains the epidermis hydrolipidic film, moisturises and softens the skin. This BASE combines harmoniously with active ingredients of your choice so as **to create a personalized treatment**.

### A HIGHLY PROFESSIONAL TREATMENT

The preparation of the texture requires a technical gesture, which makes it a **specific professional treatment**. So, the work of the beautician will be promoted. She will know how to **associate the technical side with the cocooning gesture** : the application of the mask can be turned into a relaxing **massage** thanks to its original and fresh texture. The facial lines are relaxed.

moisturizing, Fucogel®, soft, smooth, sugar, glucose, new texture.

Dose: 20g of powder, 30mL of glycerin lotion, 50mL of water.  
Pour the lotion progressively on the powder and mix as one goes along. Add the water and continue the mix until obtaining a silky gel. Use water at 20°C.  
Apply the mask on your face avoiding the eyes. Let it act 15min. Peel it off with a wet sponge.

Use before: 29 months
